hypothetical protein alr4417 [imported] - Nostoc sp. (strain PCC 7120)
C;Species: Nostoc sp. PCC 7120
A;Note: Nostoc sp. Strain PCC 7120 is a synonym of Anabaena sp. strain PCC 7120
C;Accession: A12357
C;Accession: A12357

BASOPHILIC LEUKOCYTES.
SUBUNIT: C3 precursor is first processed by the removal of 4 Arg residues, forming two chains, beta and alpha, linked by a disulfide bond. C3 convertase activates C3 by cleaving the alpha chain, releasing C3A anaphylatoxin and generating C3B (beta chain)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Chem.

Immunol Invest. 15:365-378(1986).

-i- PUNCTION: C3 PLAYS A CENTRAL ROLE IN THE ACTIVATION OF THE COMPLEMENT SYSTEM. ITS PROCESSING BY C3 CONVERTAGE IS THE CENTRAL REACTION IN BOTH CLASSICAL AND ALTERNATIVE COMPLEMENT PATHWAYS. AFTER ACTIVATION C3B CAN BIND COVALENTLY, VIA ITS REACTIVE AFTER ACTIVATION C3B CAN BIND COVALENTLY, VIA ITS REACTIVE THIOLESTER, TO CELL SURFACE CARBOHYDRATES OR IMMUNE AGGREGATES.

-i- SUBUNIT: C3 PRECURSOR IS FIRST PROCESSED BY THE REMOVAL OF 4 ARG RESIDUES, FORMING TWO CHAINS, BETA & ALPHA, LINKED BY A DISULFIDE BOND. C3 CONVERTASE ACTIVATES C3 BY CLEAVING THE ALPHA CHAIN, RELEASING C3A ANAPHYLATOXIN & GENERATING C3B (BETA CHAIN + ALPHA)

-!- INDUCTION: By phosphate starvation.
-!- INDUCTION: By phosphate starvation.
-!- MASS SPECTROMETRY: MM=36413; MM ERR=18; METHOD=MALDI.
-!- MISCELLANEOUS: Its optimum pH is between 7.25 and 7.75
temperature is 35 degrees Celsius.
-!- SIMILARITY: BELONGS TO THE D-ISOMER SPECIFIC 2-HYDROXYA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDLINE=21264507; PubMed=11278981;

"Genome sequence of Yersinia pestis KIM.";

J. Bacteriol. 184:4601-4611(2002).

-!- FUNCTION: Catalyzes the first step in hexosamine metaboli converting fructose-6P into glucosamine-6P using glutamir nitrogen source (By similarity).

-!- CATALYTIC ACTIVITY L. L-glutamine + D-fructose 6-phosphate glutamate + D-glucosamine 6-phosphate.
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: IN THE C-TERMINAL SECTION; BELONGS TO THE SISGEPAT SUBPAMILY.
